

# The **FACTS** about high-titre (HT) cows.

Out of 78,868 cows tested to date in the Ontario Johne's program, **only 1 in 700 were found to be HT.\***

\* Ontario cows only from January 2010 to September 2011

## ***Concerned your best cow might be HT?***

At such low odds, the chance you have any HT cows in your herd (let alone your best cow), is extremely low. However, if your best cow is in fact HT, then she really ISN'T your best cow.

## ***Remember that it's still your decision***

No matter what your herd results are, the fact remains **YOU** decide whether or not to cull your HT cow.\*\*

**DON'T MISS OUT - test now for FREE\*\***

**Johne's Education & Management Assistance Program**
