Management Assistance
Program

Johne's Testing Submission Form

Ontario Johne's Education and Management Assistance Program

Please Select one type of testing:

- Milk ELISA Testing:** Complete and present this form to your DHI field staff at your next DHI test date, to ensure that all lactating cows will be tested for Johne's disease status. If not a regular DHI customer and would like to use the milk test, please see the Program Summary Sheet or our website at www.johnes.ca.

OR

- Blood ELISA Testing:** Complete and present this form to your veterinarian, to send with the individual cow blood samples to the Animal Health Laboratory, University of Guelph.

Producers will receive \$8.00 per animal tested, and \$500 per high titre animal properly removed, regardless of testing method, conditional on satisfying the program guidelines.

Important: To accommodate lab testing capacity, testing is being done on a predetermined schedule. Please visit our website at www.johnes.ca to view the entire testing schedule.

Agreement

I agree to allow all my submitted program samples, Johne's test results and DHI data to be released to the Johne's Education and Management Assistance Program, for the purposes of testing reimbursement, summarizing test results, and related research projects. I understand that all individual producer information will be kept strictly confidential and will be used solely for the purposes of this program.

Farm Name: _____ Phone: _____
